

1. Heating implement, which comprises

- 5 - at least two frame parts which are made out of wood and placed one on top of the other,
- at least one of frame part has at least one groove for leading the combustion air into the structure of the heating implement,
- inside the heating implement one or more spacing pieces have been placed in the groove,
- 10 - said spacing pieces can be placed between the frame parts to form an air gap between them, and
- there are one or more holes for the flame, which extend to the groove in at least one of the frame parts.
- 15 2. Heating implement in accordance with claim 1, in which
- the spacing piece is rectangular in shape.
3. Heating implement in accordance with claim 1, in which
- the spacing piece is wedge-shaped.
- 20 4. Heating implement in accordance with claim 1, in which
- the heating implement comprises an igniting element located in the groove.
5. Heating implement in accordance with claim 1, in which
- 25 - the opposing surfaces of the frame parts are nearly straight.
6. Heating implement in accordance with claim 1, in which
- the frame parts are made from solid wood.
